## Customer Profile

Hamlin CISD is located in Hamlin, TX, in Jones and Fisher counties, roughly 40 miles north of Abilene, TX. As a Title I school with about 250 students, the district employs the collegiate education model, allowing them to use state-of-the-art technologies and teaching methods to prepare students to either enter college or the workforce -- most of all, they focus on ensuring student safety and employability.

Their communications investment in a comprehensive, integrated phone system allows them to focus on learning.

The first and most pressing concern of the district was whether or not their vendor -- whichever company that was -- had experience with E-rate monies.

Thankfully for both parties, Advanced VoIP Solutions has been E-rate funded in the past and has the required filer ID. Pairing that with Hamlin's experienced filer and funding was a cinch!

To ensure security, Hamlin CISD was planning to keep 3 of their old, legacy telephone lines to make sure they could still place calls in an emergency situation like an internet outage. This would have not only been costly, but unreliable. To solve this Advanced VoIP provided them with a cellular backup for their phone system -- the phones use that connection in an outage situation, resulting in the district being able to dial emergency services no matter the outside circumstances.

Lastly, Hamlin's original phone bill with their old phone number provider didn't show all the numbers they needed to port over to Advanced VoIP. Most phone companies require the customer to handle the porting process -- without the relevant experience, this can be a nightmare scenario, and a huge drain on resources.

Advanced VoIP is the only telecom provider with a white-glove team that handles 100 percent of the porting process for all its customers, so the district only had to worry about what they wanted from their phone system, NOT how to go about making it happen.

# Other Solutions

- ❖ District-Wide Emergency Intercom System
- ❖ Mobile App for Calls and Texts
- ❖ Call Details and Recording Included
- ❖ Online Management Dashboard
- ❖ Managed Yealink 5-series Phones

---

Advanced VoIP Solutions is a "Client First" VoIP service provider for governments, higher education institutions, and businesses that want to create better experiences with and for their clients.

Knowledgeable and easy to contact technical support

Smooth transition, setup, and installation
